

How to get Elsevier articles after December 31, 2018

Regardless in which information resource you do your search, when viewing your results you should find the Max Planck **SFX service**. This is a link resolving service that either takes you from your search results directly to the article on the publisher's website or – if no full text is available to you - offers a very convenient form for ordering the document. You will find this Citation Linker integrated in databases like Web of Science, SciFinder and many other information resources.

Remark: The SFX button is useful for all document searches and requests, not only Elsevier-related papers. The only difference is **where** your requests end up: SFX requests for Elsevier articles not covered by subscriptions are automatically managed by the Max Planck Digital Library (MPDL), all others by your local library team.
